

AUDIOLOGICAL EVALUATION  
TEST DATE: September 9, 2013

HISTORY

**Name:** Noah Nottingham

**Age:** 7 years 8 months

**Reason for visit:** hearing evaluation as part of the Child Development Clinic interdisciplinary team evaluations

**Hearing history:** Noah has passed previous hearing screenings, per parent report.

TEST RESULTS

**Behavioral Assessment**

**Procedure: conditioned play audiometry:** a child is taught to respond to auditory stimuli by playing a game such as putting a peg in a board. Threshold is determined as the lowest decibel (dB) level at which the child responds a minimum of two times. Testing was completed using a test assistant in the test room with the child. A judgment of the reliability of the child's responses is noted on the audiogram.

**Normal range:** Normal hearing is defined as thresholds of 0-20 dBHL

**Results:**

PT.NO: U3311771

NAME: NOTTINGHAM, NOAH

DOB: 12-23-05

Date: 09-09-13

**ASSESSMENT**

Noah has normal hearing in both ears. Specifically, he demonstrates behavioral hearing thresholds of 0 to 15 dBHL across the frequency range of 250 to 8000 Hz.

**RECOMMENDATIONS**

Hearing can change throughout childhood: screen hearing yearly from age 4 to age 16 at regular well-child visits and in public school according to national health guidelines.
